Get Your DeviceNet Slave Devices Connected Directly to Your BACnet MS/TP Master

The 460DMBMS moves data between up to 32 DeviceNet slaves and a BACnet MS/TP building automation system. With the 460DMBMS, you are making a direct connection between DeviceNet slave data and BACnet MS/TP binary and analog objects.

Bridge your factory automation systems with your building automation systems.
How Do I Use the 460DMBMS-N34 in My Application?

Up to 400 bytes of DeviceNet data will be mapped into your BACnet MS/TP master. DeviceNet data will be mapped into your BACnet MS/TP master as binary and analog BACnet MS/TP objects.

It's really that simple. Need to modify your data as it passes from one protocol to the other? No problem. Each data mapping you apply can be modified with up to three mathematic functions. Add 4 to a value, multiply by 4 and divide by 10 with ease.

Why Use Real Time Automation as a Gateway Supplier?

While there are certainly other companies offering protocol gateways, there is no one who provides the level of support and service that you receive from RTA.
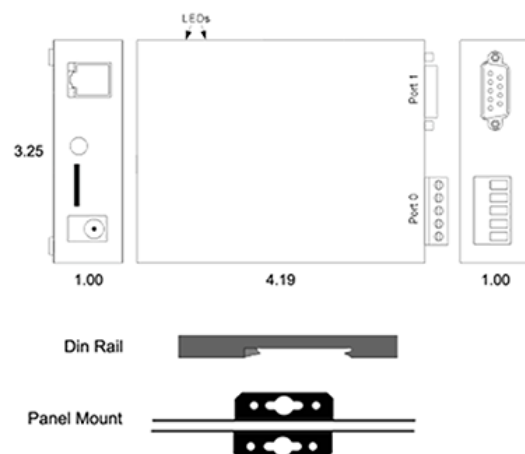

When you call, a live person answers the phone. When you talk with sales, you will get honest answers and recommendations. When you get support, it is from an engineer who had a hand in the product's development, and support doesn't require a ticket or 24-hour wait.
